

How to clear Mailbox cache to be able to re-login

Hello

Many of you are encountering errors when attempting to log in via mailbox.com or the branded URL **after the new update**. To resolve this issue:

If you have connected multiple accounts – please logout from all the accounts one by one.

For regular users(using mailbox.com) the easiest way to access it again:

Navigate to mailbox <https://mailbox.com>, click “Logout” and log in again to the mailboxes, that will solve and fetch the new update.

For branded users(using a custom brand domain):

Navigate to <https://securemailway.com> once you are there login to the admin@ account and delete the brand config, then navigate to mailbox <https://mailbox.com>, login to the admin@ account and you will need to create the brand again, here is a quick guide: <https://mailwish.com/guides/how-to-re-brand-mailbox-com/>

Manually clear data if the above steps do not work:

Google Chrome:

1) Open **F12**(Console log) to open the Developer tools.

2) Click on the **Application** tab

3) Click **Clear Site Data** to remove old data

Other browsers:

Firefox:

Please review the following guide <https://support.mozilla.org/en-US/kb/clear-cookies-and-site-data-firefox>

Internet Explorer:
