

How to re-brand the reseller account (Complete guide, 5 minutes)

First, we will start with rebranding Mailbux.com (if needed, you can still use Mailbux.com for your customers).

To rebrand Mailbux.com (the webmail), please follow this guide:

[How to re-brand mailbux.com](#)

---

The next step is to rebrand the reseller login page and service area:

<Your assigned server> = Please check the information received in the Important Reseller Information email.

To rebrand the login page for the reseller account (<https://<Your assigned server>.mailbux.com:2222>), follow these steps:

How to re-brand the reseller account (Complete guide, 5 minutes)

1. Create a CNAME record pointing to <Your assigned server>.mailbux.com.
2. Add this domain (the one you selected for the CNAME) to your reseller account in the **Domains** section and install the SSL certificate.
3. In the reseller account, go to **Reseller Tools > Skin Manager** to update the branding settings.

This will allow you to customize the login page with your desired branding.

The CNAME you created at **point 1** (for example, mail.yourdomain.com) and the domain mail.yourdomain.com will be used for your clients as the MX, SMTP, IMAP, and POP3 servers.

---

To rebrand the SPF record, please add our SPF record (``v=spf1 include:mailwish.com ~all``) to either yourdomain.com or mail.yourdomain.com. Provide your SPF record to your customers as follows:

- If using **mail.yourdomain.com**:

`v=spf1 include:mail.yourdomain.com ~all`

- If using **yourdomain.com**:

How to re-brand the reseller account (Complete guide, 5 minutes)

v=spf1 include:yourdomain.com ~all

That's all you need to do to complete the rebranding for the reseller account!
